***Detailed Action***

Amended claims 1 and 8 are pending in this application for examination.

Applicants' amendments and arguments filed on Dec. 21, 2006, have been fully considered and are deemed to be persuasive to overcome the rejections previously applied. Rejections and/or objections not reiterated from previous office action are hereby withdrawn.

***Priority***

Acknowledgment is made of applicant's claim for the following priority for the instant claims. This application is a CIP of 09/686,234 filed on 10/11/2000 ABN, which claims the benefit of 60/159,369 filed on 10/14/1999.

***Drawings***

The drawings are accepted.

***EXAMINER'S AMENDMENT***

An Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the issue fee.

Authorization for this Examiner's amendment was given in a telephone interview with Brian J. Lally, (Reg. No. 51, 911) on 01/31/2007.

The application has been amended as follows:

***In the Specification:***

First paragraph, line 3 insert "now abandoned," after "Oct. 11, 2000,".

**In the claims:**

**Cancel claims 4-7 and 10-11.**

***Allowable Subject Matter***

Claims 1 and 8 are allowed.

The following is an examiner's statement of reasons for allowance:

All elected claims, 1 and 8, are limited to isolated nucleic acid molecules of the nucleotide sequence of SEQ ID NO: 1 and SEQ ID NO: 4, encoding an isoxaben resistant cellulose synthase. Following a diligent search it was determined that the closest prior art disclosed by Arioli et al., (US Patent No.: 6,495,740), a Cellulose and/or Beta-1,4-glucan synthase, that has 99.8% and 99.7% sequence homology to SEQ ID NO: 1 and 4 of the instant application. Therefore, the prior art neither teaches nor suggests an isolated polynucleotide comprising the nucleotide sequence of SEQ ID NO: 1 and 4 and said polynucleotides encoding an isoxaben resistant cellulose synthase. The utility of said polynucleotides, as encoding a polypeptide with an isoxaben resistant cellulose synthase, is credible based on the ability of said polynucleotides when expressed in plants to confer resistance against herbicide isoxaben. Said polynucleotides encoding a polypeptide with an isoxaben resistant cellulose synthase has real-world utility and permits generation of transgenic plants with isoxaben herbicide resistance.

Any comments considered necessary by applicant must be submitted no later than the payment of issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
